Dec 14, 1999

DOCUMENT-IDENTIFIER: US 6002340 A

TITLE: Smart switch

## DEPR:

Other configurations are possible. For example, an additional link may be provided between WAN 180 and system 121 so that should primary control system 110 fail, system 121 can function as a secondary or backup control system accessible by the system administrator. In this configuration, system 121 can send commands towards primary control system 110 which is then monitored by remote controller 200, thereby enabling the system administrator to communicate with remote controller 200 via WAN 180 and system 121, while bypassing primary control system 110.
